

# 字节跳动Netpoll网络包

官方网站: <https://www.cloudwego.io/zh/docs/netpoll/>

# 内容目录

- Netpoll包和net包的对比
- 优点1：业务层使用时的零拷贝
- 优点2：读写socket的优化：readv/writev、零拷贝
- BIO改成NIO
- LinkBuffer的设计

# Netpoll包和net包的对比

```
import (  
    "context"  
    "github.com/cloudwego/netpoll"  
)  
  
func main() {  
    listener, _ := netpoll.CreateListener("tcp", "localhost:6382")  
    eventLoop, _ := netpoll.NewEventLoop(  
        func(ctx context.Context, connection netpoll.Connection) error {  
            reader, writer := connection.Reader(), connection.Writer()  
            msg, _ := reader.Next(512)  
            writer.WriteBinary(msg)  
            writer.Flush()  
            _ = reader.Release()  
            return nil  
        },  
    )  
    _ = eventLoop.Serve(listener)  
}
```

```
import (  
    "net"  
)  
  
func main() {  
    listener, _ := net.Listen("tcp", "localhost:6380")  
    for {  
        conn, _ := listener.Accept()  
        go func() {  
            for {  
                buf := make([]byte, 512)  
                _, _ = conn.Read(buf)  
                conn.Write(buf)  
            }  
        }()  
    }  
}
```
